

1

What is claimed is:

A method of printing a value bearing indicium (VBI), the method comprising the steps of:

generating a message digest by hashing relevant information;

generating a digital signature from the message digest;

generating a textual representation of the digital signature; and

generating a 2-D bar code comprising the relevant information.

2. The method of claim 1, wherein the VBI is a ticket.

3. The method of claim 1, wherein the VBI is a coupon.

4. The method of claim 1, wherein the VBI is a traveler's check.

5. The method of claim 1, wherein the VBI is currency.

6. The method of claim 1, wherein:

the representation of the digital signature further includes a right side;

the 2-D bar code further includes a left side; and

the representation of the digital signature right side is adjacent to the 2-D bar code left side.

7. The method of claim 1, wherein:

the representation of the digital signature further includes a top side;

the bar code further includes a bottom side; and

the representation of the digital signature top side is adjacent to the 2-D bar code bottom side.

- 1
8. The method of claim 1, wherein:
the representation of the digital signature further includes a bottom side;
5 the bar code further includes a top side; and
the representation of the digital signature bottom side is adjacent to the 2-D bar code top side.
- 10
9. The method of claim 1, wherein:
the representation of the digital signature further includes a right side;
the bar code further includes a left side; and
the representation of the digital signature right side is adjacent to the 2-D bar code left side.
- 15
10. The method of claim 1, wherein the VBI is postage for a mail piece.
- 20
11. The method of claim 10, the relevant information including one or more of an indicium version number, an algorithm identifier, a certificate serial number, a postage security device manufacturer identifier, a postage security device model identifier, a postage security device serial number, an ascending register value, a postage amount, a date of mailing, a licensing postal code, a software identifier, a descending register value, and a rate category.
- 25
12. A data processing system adapted to print a VBI, the data processing system comprising:
30 one or more processors; and
one or more memories operably coupled to the processors and having program instructions stored therein, the processors being operable to execute the program instructions, the program instructions including:

1

generating a message digest by hashing relevant information;

5

generating a digital signature from the message digest;

generating a text representation of the digital signature; and

generating a 2-D bar code comprising the relevant information.

10

13. The data processing system of claim 12, wherein:

the representation of the digital signature further includes a right side;

the 2-D bar code further includes a left side; and

the representation of the digital signature right side is adjacent to the 2-D bar code left side.

15

14. The data processing system of claim 12, wherein:

the representation of the digital signature further includes a top side;

the bar code further includes a bottom side; and

the representation of the digital signature top side is adjacent to the 2-D bar code bottom side.

20

25

15. The data processing system of claim 12, wherein:

the representation of the digital signature further includes a bottom side;

the bar code further includes a top side; and

the representation of the digital signature bottom side is adjacent to the 2-D bar code top side.

30

16. The data processing system of claim 12, wherein:

the representation of the digital signature further includes a left side;

the 2-D bar code further includes a left right; and

35

- 1 the representation of the digital signature left side
is adjacent to the 2-D bar code right side.
- 5 17. The data processing system of claim 12 wherein the data
processing system is a closed metering system.
18. The data processing system of claim 12 wherein the data
processing system is an open metering system.
- 10 19. A data processing system adapted to print a VBI, the data
processing system comprising:
a processor; and
a memory operably coupled to the processor and having
program instructions stored therein, the processor being
operable to execute the program instructions, the program
instructions including:
generating a message digest by hashing relevant
information;
generating a digital signature from the message
digest;
generating a text representation of the digital
signature; and
generating a 2-D bar code comprising the relevant
information.
- 25 20. The data processing system of claim 19, wherein:
the representation of the digital signature further
includes a right side;
the 2-D bar code further includes a left side; and
the representation of the digital signature right side
is adjacent to the 2-D bar code left side.
- 30 21. The data processing system of claim 19, wherein:
- 35

1

the representation of the digital signature further includes a top side;

the 2-D bar code further includes a bottom side; and

5

the representation of the digital signature top side is adjacent to the 2-D bar code bottom side.

22. The data processing system of claim 19, wherein:

10

the representation of the digital signature further includes a left side;

the 2-D bar code further includes a right side; and

the representation of the digital signature left side is adjacent to the 2-D bar code right side.

23. The data processing system of claim 19, wherein:

5

the representation of the digital signature further includes a bottom side;

the 2-D bar code further includes a top side; and

the representation of the digital signature bottom side is adjacent to the 2-D bar code top side.

20

24. The data processing system of claim 19, wherein the VBI is postage for a mail piece.

25

25. The data processing system of claim 19, wherein the VBI is a ticket.

26. The data processing system of claim 19, wherein the VBI is a coupon.

30

27. The data processing system of claim 19, wherein the VBI is a traveler's check.

28. The data processing system of claim 19, wherein the VBI is currency.

35

1

29. The data processing system of claim 19, wherein the VBI is postage for a mail piece.

5

30. A computer-readable storage medium embodying computer program instructions for execution by a computer, the computer program instructions adapting a computer to provide a value bearing indicium to a user via a computer network, the computer program instructions comprising:

10

generating a message digest by hashing relevant information;

generating a digital signature from the message digest;

15

generating a text representation of the digital signature; and

generating a 2-D bar code comprising the relevant information.

20

31. The computer-readable storage medium of claim 30, wherein:
the representation of the digital signature further includes a right side;

the 2-D bar code further includes a left side; and

the digital signature right side is adjacent to the 2-D bar code left side.

25

32. The computer-readable storage medium of claim 30, wherein:
the representation of the digital signature further includes a top side;

30

the 2-D bar code further includes a bottom side; and

the representation of the digital signature top side is adjacent to the 2-D bar code bottom side.

35

33. The computer-readable storage medium of claim 30, wherein:

1 the representation of the digital signature further includes a left side;

the 2-D bar code further includes a right side; and

5 the representation of the digital signature left side is adjacent to the 2-D bar code right side.

34. The computer-readable storage medium of claim 30, wherein:
the representation of the digital signature further includes a bottom side;

10 the 2-D bar code further includes a top side; and

the representation of the digital signature bottom side is adjacent to the 2-D bar code top side.

15 35. A VBI comprising:

a 2-D barcode including relevant information; and

a text representation of a digital signature generated from a message digest, the message digest generated using a secure hash algorithm to hash the relevant information.

20 36. The VBI of claim 35, wherein:

the VBI is postage for a mail piece; and

the relevant information is mailing information.

25 37. The VBI of claim 36, the mailing information including one or more of an indicium version number, an algorithm identifier, a certificate serial number, a postage security device manufacturer identifier, a postage security device model identifier, a postage security device serial number, an ascending register value, a postage amount, a date of mailing, a licensing postal code, a software identifier, a descending register value, and a rate category.
